

Explore the different methods to get help from the linux environment.

man Command

Usage

`man[command]`

Explanation

The man (manual) command displays the manual pages for commands, system calls, libraries, and other topics. Manual pages are organized into sections, each providing detailed information about a command or function.

—help option

Usage

`[command] --help`

Explanation

Many commands and programs offer a --help option that provides a brief summary of the command's usage, options, and arguments. This is usually a quick way to get help without accessing the full manual page.

Info command

Usage

`info [command]`

Explanation

The info command displays the GNU info documentation, which provides a more detailed and structured view of documentation compared to man pages. Info pages are organized in a hyperlinked format for easier navigation.

'what is' command

Usage

`whatis [command]`

Explanation

The `whatis` command provides a brief description of a command or function by searching the short descriptions in the man page database.

‘apropos’ command

Usage

`apropos[command]`

Explanation

The `apropos` command searches the man page descriptions for a specified keyword and lists all relevant man pages. This is useful for finding commands related to a particular topic.
